Legend

A Gun repair shop, belonging to navy dockyard in the Korabelnaya Bay
 B Naval hospital ground which had to be crossed by the PWs on their way from the PW camp to A

- 1 Forge, 20x10 meters, stone building, equipped with an electric hammer served by five men. The forge produces replacement parts (for the gun mounts?) for light-caliber guns sent ashore by the ships for overhaul or repair. Calibers up to 120 mm.
- 2 A destroyed and not yet rebuilt structure
- 3 Mechanical workshop, about 80x20 meters. Serves also as assembly shop. The replacement parts forged in the forge (1) are treated on German machines (source said lathes); at the same time the guns are stripped and reassembled
- 4 Track leading to Sevastopol railroad station
- 5 A double barbed-wire fence, 2 meters high
- 6 Admiralty Yacht, a small vessel used as office ship for a high-echelon commander, either the commandant of the fortress or the commander-in-chief of the naval forces stationed in Sevastopol, aboard which the admiral is received with usual ceremony
- 7 A hospital vessel
- 8 Road to PW camp

During the period of observation the guns arrived on former German naval landing craft and were unloaded by PWs and first stored in front of workshop 1, from where they were moved to hall 3 for treatment. After completion they were shipped back from there. The caliber of the treated guns was usually 120 mm. The entire area was guarded by naval sentries.
